BUSINESS REQUIREMENTS DOCUMENT (BRD)

OnboardX ：(Employee Onboarding Management System)

Project Type: Corporate HR Application

Prepared by: Mridul Gupta

Technology: React.js, Node.js, Express.js, MongoDB

1. Introduction

1.1 Purpose

The purpose of this project is to develop an Employee Onboarding Management System that helps companies manage the joining process of new employees in an organized way.

The system will provide a common platform for HR, new employees, IT teams, and reporting managers to complete and track onboarding activities.

1.2 Project Background

In many organizations, the onboarding process is handled through emails, spreadsheets, and manual follow-ups. This can make it difficult for HR to track pending documents, coordinate with different departments, and ensure that all joining formalities are completed on time.

OnboardX aims to bring these activities together in one system so that the onboarding process becomes easier to manage and monitor.

2. Business Objectives

The main objectives of the project are:

- To reduce manual work and repeated follow-ups by the HR department.
- To maintain employee joining documents in one centralized system.
- To coordinate onboarding activities between HR, IT, and reporting managers.
- To track the progress of each new employee's onboarding.

3. Scope of the Project

3.1 In-Scope

The following features will be included in the first version of the application:

Module	Description
Employee Registration	HR can create profiles for newly hired employees.
Document Management	Employees can upload required joining documents.
Document Verification	HR can review, approve, or request corrections to documents.
Task Management	HR, IT, and managers can assign and update onboarding tasks.
IT Asset Allocation	IT can record laptop, email, and system access assignments.
Progress Tracking	HR can view the status of each employee's onboarding.
Dashboard & Reports	Displays onboarding progress and pending activities.

3.2 Out-of-Scope

The initial version will not include:

- Payroll processing and salary calculations.
- Attendance and leave management.
- Recruitment and candidate selection.
- Performance appraisal and employee exit management.

4. Functional Requirements

Functional requirements describe what the system should do.

Requirement IDs are included to make the document easier to review and discuss.

FR-01: User Login and Access

The system shall allow authorized users to log in using their registered credentials. Access to modules will depend on the user's role.

FR-02: Employee Profile Creation

HR shall be able to create a new employee profile containing name, employee ID, department, designation, joining date, and contact details.

FR-03: Document Submission

New employees shall be able to upload required joining documents and view the status of each submitted document.

FR-04: Document Verification

HR shall be able to review submitted documents, mark them as verified or rejected, and provide a reason when corrections are required.

FR-05: Onboarding Checklist

The system shall maintain a checklist of tasks assigned to employees and departments. Users shall be able to update task status as Pending, In Progress, or Completed.

FR-06: IT Asset Allocation

The IT team shall be able to record assigned equipment, such as laptops, and update the status of email and system access setup.

FR-07: Progress Dashboard

HR shall be able to view the onboarding status of all new employees, including completed tasks, pending documents, and overdue activities.

FR-08: Notifications and Reports

The system shall display notifications for pending tasks and provide reports showing onboarding completion status.

5. Non-Functional Requirements

These requirements describe how the application should perform.

Requirement	Description
Security	Only authorized users should be able to access employee information.
Performance	Dashboards and employee records should load within a reasonable time under normal usage.
Usability	The interface should be simple and easy for employees and HR to understand.
Reliability	Employee records and onboarding progress should be stored consistently without data loss during normal operations.
Maintainability	The application should be structured so that new features can be added in the future.

6. Technology Requirements

The application will use the MERN stack.

Technology	Purpose
React.js	Frontend interface and dashboards
Node.js	Backend runtime
Express.js	REST API development
MongoDB	Storage of employee profiles, tasks, and onboarding records
